The Manufacturing Process
This diagram illustrates a cycle involving plants, earth's nutrients, composters, animals, factories, materials, products, and consumers. The cycle starts with plants, which provide earth's nutrients. These nutrients flow to composters, then to animals, and back to plants, completing the natural cycle. The cycle also includes a human element: factories transform materials into products, which are consumed by humans, thus completing the cycle.
The Construction Process
The Future
NATURE LOVES BAUFRITZ – THANK YOU!
